Figure 3.9: Differences in average reading, writing and mathematics scores by whether the language of instruction is spoken at home

- On average, children who reported that the language of instruction was the same as the language spoken at home outperformed children who spoke a different language at home.

- Higher differences were observed for writing literacy in generally lower-performing countries.

The majority of children attended schools where teachers in charge of teaching the language of instruction at Grade 5 reported that they had attended reading training during pre-service and/or in-service training.

However, in almost all countries, a non-negligible percentage of children in Grade 5 were in class with teachers who had received no training in reading (in the language of instruction used for the SEA-PLM 2019 assessment) before or during their service.
